A MANUSCRIPT ON MATHEMATICS: Like all other branches of knowledge and learnings, Muslim Scholars in the past, had topped the list of Mathematicians also. But unfortunately their works and creations are extremely rare and hard to find, as Western Scholars collected and took away whatever they could lay their hands on.

In hand, is a Manuscript in Arabic language where neither the title of the book nor the identity of author is available in the book itself. However, frequent references have been made of Nizamul Mulk Tusi, the top ranking mathematician of the world. The author has commented upon, criticised and discussed Hikmatul Aien/ Sharhe Hikmat ul Aien. Mathematical terminology is all over available in the book: e.g. Square, Triangle, Circle, etc. movement, motion, change, "Harakat al falakia wl audhaa- al kawkabia"

حکمته ائین

صركات الظلمة في الاوضاع الكوكبية

at the end it appears that the writer could not complete as the last word- discussion on triangle - in "till" حتى .....

However, whatever it is is an asset and worth utilization by those who know the subject.
